

## Do you Grow Crops or Keep Livestock on your Property?

Learn how you can ensure clean water through

**Agricultural Best Management Practices** such as:

### **Conservation Plans**

A document created by the farmer and a conservation planner to identify resource concerns and create a plan of action.

### **Nutrient Management**

These plans document nutrient sources and aim to keep them separate from clean waterways in the surrounding area.

### **Agricultural Funding and Technical Support**

Funding programs are available to help agricultural landowners and operators implement practices that improve water quality.

For more information on these practices, visit [www.cwmp.org/farmer\\_resources](http://www.cwmp.org/farmer_resources) For more information about stormwater and agricultural requirements in (enter municipality) visit (website link).
